

## **MANUFACTURERS DECLARATION**

### **ANTI-LIGATURE FEATURES OF INP... SERIES**

Anti-ligature devices are meant to prevent vulnerable people from accidentally or intentionally self-harming. There are many factors that keep custodial luminaires safety for users. Robust construction contributes to the luminaire's durability. This allows the luminaires to function in the facility for many years. The special design and mounting prevent from self-harming and suicidal behaviour. Proper operating mode of the luminaire creates appropriate environment for long-term stay or treatment, ensuring adequate room illumination. All of the above ensure an appropriate level of safety and well-being for our luminaires users.

We as manufacturer declare that the custodial INP product group with its construction, impact resistance, operation mode and parameters meets with the criteria of anti-ligature light fixtures.
